OVERVIEW OF 1991-92 SMALL GAME HUNTING SEASONS

SQUIRREL

Statewide squirrel hunting success decreased 18% from last season. As with last year's results, the best hunting success was reported in the Plateau and Middle regions. Overall, the season rated only fair. A fair mast crop statewide in fall 1991 indicate prospects for the 1992-93 squirrel season will probably not improve significantly, if at all.

DOVE

Statewide dove hunting success decreased 5% from last year. This decrease was similar to the 2.9% decline reported in the number of doves heard in Tennessee during the spring call-count survey (Dolton, D.D. 1991. Mourning Dove Breeding Population Status, 1990. U.S. Fish & Wildlife Service technical report, p.11). Good hunting success was reported in the Middle region, but was poor elsewhere. Overall, the season rated as poor.

QUAIL

Statewide quail hunting success was similar to last year. The best success was reported in the West and Middle regions, particularly in November in the West (.92 quail harvested per hour of effort) and January in the Middle Region (1.39 quail per hour). Success on WMAs was good in November, but then declined. The 1990-91 winter was relatively mild and should have contributed to a good carry-over of birds to the breeding season; however, rainy spring weather may have impacted survival of young chicks. Overall, the season rated as fair when compared to the 39-year average.

RABBIT

Statewide hunting success increased slightly (up 6%) from last year. The best success was reported in the Middle region. Good success was experienced in the Middle region, but rated poor to fair elsewhere. Overall, the season rated as poor.

RACCOON

Statewide hunting success decreased 18% from last year. Success was excellent in the West region. Even though observations by Agency personnel have indicated that the raccoon population has increased in the eastern two-thirds of the state, hunting success across this range was still poor. The season was lengthened 11 days for the 1991-92 season in the East Tennessee unit. On a statewide basis, the season rated as fair.

GROUSE

Trends resulting from the bag check survey indicate that grouse hunting success increased 20% from last year, and rate the season as poor to fair. However, due to the small number of grouse hunters contacted during this survey (n=120), it is advised that a more detailed and accurate assessment of the 1990-91 season would be obtained by referring to the "Tennessee Ruffed Grouse/Woodcock Hunter Survey Report, 1991-92" (TWRA Technical Report, which is in process of analysis at the time of this printing).

SMALL GAME REGIONS FOR THE FIELD BAG CHECK SURVEY

For the purpose of analysis of Field Bag Check Survey data, Tennessee is divided into four Small Game Regions. The determination of these regions is based on four general physiographic region groupings. Each Small Game Region is characterized by similar climatic, topographic and vegetative features which together tend to influence small game populations within that region in a similar manner. These regions are:

WEST: Includes the Coastal Plain and Mississippi River Floodplain, located west of the Tennessee River.

MIDDLE: Includes the Western and Eastern Highland Rims, and the Central Basin.

PLATEAU: Includes the Cumberland Plateau.

EAST: Includes the Ridge and Valley, the Blue Ridge and the Appalachian Mountain regions.
