RADIATION MONITORIN .ND CONTROL REPORT

Division Maintenance
Department K1002
Location K-33 drum room

Date 1-25-64

Checked by BC Burnette

Procedure: (1) Check instrument calibration; (2) Record all alpha contamination readings above the P.A.L.; (3) If all readings are less than the P.A.L., record the highest reading obtained; (4) For Beta + Gamma Radiation and Airborne Activity, record as indicated below.

Area or Equipment Checked	Approx. Area Contam. ft2	Alpha Counts/Minute		Beta + Gamma Radiation			Airborne Activity Samples			
				mrep/hr		7.5 mrep/hr				
		Surface	Wipe	Surface	1 ft	Distance (ft)	Sample Number	Time Started	Volume (ft3)	Alpha Counts/min/ft3
floor area		300	<100							
equipment		250	<100							

Action Taken: None Necessary

Records File

AUDIT OF K-33 CRANE RAIL REINFORCING JOB
February 3, 1961

1. Personnel walking or working beneath welding and rigging operations did not have hard hat protection.

2. Signs indicating that work is being performed above, especially over vehicle and pedestrian passageways, were not provided.

3. Personnel, both company and subcontractor including the welding inspector, who were in close proximity of chipping operations were without eye protection.

4. Scaffolding during the welding of the channel appeared adequate.

5. Storage of material was such that traffic or access to fire fighting equipment was not obstructed.

6. Caution should be exercised to preclude the accidental entering of rivets or weld stubs into operating process motors and to cover combustible materials before welding or cutting is performed overhead.

RADIATION MONITORIN ND CONTROL REPORT

Division Maintenance
Department K-1002
Location K-131 Maintenance Storage Area

Date 6-1-61 JW
Checked by B C Burrell

Procedure: (1) Check instrument calibration; (2) Record all alpha contamination readings above the P.A.L.; (3) If all readings are less than the P.A.L., record the highest reading obtained; (4) For Beta + Gamma Radiation and Airborne Activity, record as indicated below.

Area or Equipment Checked	Approx. Area Contam. ft2	Alpha Counts/Minute		Beta + Gamma Radiation			Airborne Activity Samples			
				mrep/hr		7.5 mrep/hr				
		Surface	Wipe	Surface	1 ft	Distance (ft)	Sample Number	Time Started	Volume (ft3)	Alpha Counts/min/ft3
								Safety and Health Physics		
Floor area	200	1500	400							
Misc. equipt parts		6500	1200							
							1961 JUN 12 PM 3:24			

Action Taken: A "Request for Decontamination" Was issued on the 6-2-61

RADIATION MONITORIN ND CONTROL REPORT

Division: Maintenance
Department:
Location: K-131 electrical shop

Date: 3-7-61 JW
Checked by: B C Burrell

Procedure: (1) Check instrument calibration; (2) Record all alpha contamination readings above the P.A.L.; (3) If all readings are less than the P.A.L., record the highest reading obtained; (4) For Beta + Gamma Radiation and Airborne Activity, record as indicated below.

Area or Equipment Checked	Approx. Area Contam. ft²	Alpha Counts/Minute		Beta + Gamma Radiation			Airborne Activity Samples			
				mrep/hr		7.5 mrep/hr				
		Surface	Wipe	Surface	1 ft	Distance (ft)	Sample Number	Time Started	Volume (ft3)	Alpha Counts/min/ft³

RADIATION MONITORIN ND CONTROL REPORT

Division: Main tenance
Department: 100
Location: K-301.5 shop

Date: 5-19.61 JW

Checked by: BC Bunch

Procedure: (1) Check instrument calibration; (2) Record all alpha contamination readings above the P.A.L.; (3) If all readings are less than the P.A.L., record the highest reading obtained; (4) For Beta + Gamma Radiation and Airborne Activity, record as indicated below.

Area or Equipment Checked	Approx. Area Contam. ft2	Alpha Counts/Minute		Beta + Gamma Radiation			Airborne Activity Samples			
				mrep/hr		7.5 mrep/hr	Sample Number	Time Started	Volume (ft3)	Alpha Counts/min/ft3
		Surface	Wipe	Surface	1 ft	Distance (ft)				
floor area		200	<100							
equipment		150	<100

ALPHA CONTAMINATION AUDIT REPORT

:ation K-302-1 Lunch Room (3023) Date 3-6-61

.pervisor in Charge W. H Tuckett Total Work Area 500 ft^2

Operations in Progress None

Protective Measures in Force

SUMMARY:

		This Survey	Last Survey
ALPHA CONTAMINATION	Index	0	0
	Area Factor (Total)	0	0
	Area Factor (Wipe)	0	0

SPECIFIC LOCATION	Area (ft^2) and Class of Contamination				Maximum Reading (c/m)	
	Surface		Wipe		Surface	Wipe
Floors, Tables, Chairs, desk <100						

	Range Surface	(c/m) Wipe	Weighting Factor			
Class 0	*	–	0	Total ft^2		
Class I	500-2000	100-500	1		0	
Class II	2000-10,000	500-2000	5		0	
ss III	> 10,000	> 2000	20		0	
			Grand Total (ft^2)		0	

*Class 0 is area which is below the P.A.L. for surface reading but above the P.A.L. for wipe contamination.

			Grand Total (ft²)		0	

*Class 0 is area which is below the P.A.L. for surface reading but above the P.A.L. for wipe contamination.

WCX-1320 (10-53) K-25 RC SAFETY AND HEALTH PHYSICS

RADIATION MONITORII AND CONTROL REPORT

Division Maintenance
Department 100
Location K-303-2 Tool storage

Date 5-25-61 JW
Checked by BCBurell

Procedure: (1) Check instrument calibration; (2) Record all alpha contamination readings above the P.A.L.; (3) If all readings are less than the P.A.L., record the highest reading obtained; (4) For Beta + Gamma Radiation and Airborne Activity, record as indicated below.

Area or Equipment Checked	Approx. Area Contam. ft2	Alpha Counts/Minute		Beta + Gamma Radiation			Airborne Activity Samples			
				mrep/hr		7.5 mrep/hr				
		Surface	Wipe	Surface	1 ft	Distance (ft)	Sample Number	Time Started	Volume (ft3)	Alpha Counts/min/ft3
Floor area	240	1650	200							
Tool box storage shelves	100	1500	150							
Tool boxes (40)	80	2600	450	Pal						

Safety and Health Physics
1961 MAY 12 PM 3:25

Action Taken: A "Request for Decontamination" was issued.

RADIATION MONITORIN .ND CONTROL REPORT

Division Maintenance
Department
Location K-310-1 Storage Area

Date 2-23-61 DW
Checked by BC Burrell

Procedure: (1) Check instrument calibration; (2) Record all alpha contamination readings above the P.A.L.; (3) If all readings are less than the P.A.L., record the highest reading obtained; (4) For Beta + Gamma Radiation and Airborne Activity, record as indicated below.

Area or Equipment Checked	Approx. Area Contam. ft2	Alpha Counts/Minute		Beta + Gamma Radiation			Airborne Activity Samples			
				mrep/hr		7.5 mrep/hr				
		Surface	Wipe	Surface	1 ft	Distance (ft)	Sample Number	Time Started	Volume (ft3)	Alpha Counts/min/ft3
floor area		350	<100							
saw	2	600	<100	P.P.L.						

Action Taken: None Necessary

ALPHA CONTAMINATION AUDIT REPORT

Location K-317-2 Process Maint. Shop (3042) Date 3-8-61

Supervisor in Charge _____ Total Work Area 1400 ft²

Operations in Progress Routine Pump Repair

Protective Measures in Force _____

SUMMARY:

ALPHA CONTAMINATION		This Survey	Last Survey
	Index	16	16
	Area Factor (Total)	3.9	3.6
	Area Factor (Wipe)	1.4	3.0

SPECIFIC LOCATION	Area (ft²) and Class of Contamination				Maximum Reading (c/m)	
	Surface		Wipe		Surface	Wipe
Tables, tools + machines	38	I	12	I	1800	400
" "	15	II	5	II	[illegible]	1500
" " "	2	III	2	III	>12,500	5000

	Range Surface	Range (c/m) Wipe	Weighting Factor			
Class 0	*	–	0	Total ft²		
Class I	500-2000	100-500	1		38	12
Class II	2000-10,000	500-2000	5		15	5
ss III	>10,000	>2000	20		2	2
			Grand Total (ft²)		55	19

BY PAL

*Class 0 is area which is below the P.A.L. for surface reading but above the P.A.L. for wipe contamination.

RADIATION MONITORIN AND CONTROL REPORT

Division Maintenance
Department K 002
Location K-312-2 Valley Iron Pump Shop

Date 1-4-61 JW
Checked by B C Burnell

Procedure: (1) Check instrument calibration; (2) Record all alpha contamination readings above the P.A.L.; (3) If all readings are less than the P.A.L., record the highest reading obtained; (4) For Beta + Gamma Radiation and Airborne Activity, record as indicated below.

Area or Equipment Checked	Approx. Area Contam. ft2	Alpha Counts/Minute		Beta + Gamma Radiation			Airborne Activity Samples

RADIATION MONITORIN .ND CONTROL REPORT

Division Maintenance
Department 1002
Location K-312-3 AC Pump Repair

Date 6-2-61 JW

Checked by BC Burrell

Procedure: (1) Check instrument calibration; (2) Record all alpha contamination readings above the P.A.L.; (3) If all readings are less than the P.A.L., record the highest reading obtained; (4) For Beta + Gamma Radiation and Airborne Activity, record as indicated below.

Area or Equipment Checked	Approx. Area Contam. ft2	Alpha Counts/Minute		Beta + Gamma Radiation			Airborne Activity Samples			
				mrep/hr		7.5 mrep/hr				
		Surface	Wipe	Surface	1 ft	Distance (ft)	Sample Number	Time Started	Volume (ft3)	Alpha Counts/min/ft3
Flow area	460	>12,500	550							
Pump base	3	1250	300							
Misc. Eq.		2200	1250

RADIATION MONITORING AND CONTROL REPORT

Division: Maintenance
Department: K-1002-3 Change House
Location:

Date: 4-13-61 PM
Checked by: BC Burnell

Procedure: (1) Check instrument calibration; (2) Record all alpha contamination readings above the P.A.L.; (3) If all readings are less than the P.A.L., record the highest reading obtained; (4) For Beta + Gamma Radiation and Airborne Activity, record as indicated below.

Area or Equipment Checked	Approx. Area Contam. ft²	Alpha Counts/Minute		Beta + Gamma Radiation			Airborne Activity Samples			
				mrep/hr		7.5 mrep/hr				
		Surface	Wipe	Surface	1 ft	Distance (ft)	Sample Number	Time Started	Volume (ft³)	Alpha Counts/min/ft³
floor area		400	<100							
equipment		350	<100	Pal						

Action Taken: None Necessary. 3/3 Checked < Pal radiation on hands, shoes, clothes. Total Personnel Checked

REMARKS It may be noted that high air activity occurred in cells #1 and #2 simultaneously during the period of cutting out pipe and removing pumps. The purge was good for the most part, with visible fog being noted on two short periods when cutting into #2 converter and when pumps were removed in the escape alley. Similar peak activity was noted during these periods on the constant air monitor. Pipes were blanked off immediately in most instances and, except for a single instance where a pipe was cut, all samples were below 1 c/m/ft^3 soon after 10:00 AM. Recommend that respirators be worn until equipment is cut out and blanked off. Thereafter wear respirators when system is open or when cutting and welding on contaminated equipment. With the fans blowing through the cells from the withdrawal alley to the escape alley and other fans blowing up from the escape alley and out through roof ventilators, air activity in the withdrawal alley is negligible beyond the motor platforms. Respiratory usage was best among welder and was poorest among instrument men and electricians.

NOTIFIED SUPERVISOR	NOTIFIED DEPARTMENT HEAD	NOTIFIED DIVISION SUPERINTENDENT

INVESTIGATION: A meeting was held in the K-27 Process Office to discuss the health physics practices and conditions noted during cell changes and was attended by Messrs. L. W. Anderson and G. B. Young of the Production Division, J. P. Jones and W. H. Luckett of Production Maintenance and A. F. Becher, J. C. Worthington, and W. P. Ellis of the Industrial Relations Division. The following recommendations or practices will be adopted:

1. Production will continue efforts to improve the system purge.

2. All employees will be required to wear respirators for 2 hours after the start of a job and at other times when the system is open.

3. All openings into the system or contaminated pumps, pipes, converters, etc. will be blanked off immediately after being removed.

A discussion of this report with Mr W.H. Luckett of Maintenance and Mr L.W. Anderson of Operations resulted in the following actions for future jobs of this type:

(A) Reinstructed Maintenance personnel in the use of respiratory equipment.

(B) Another look at equipment Wrappers.

(C) Better use of Decontamination Service Personnel

(D) Restudy of air movement.

WCX-2191 (11-53) K-25RC Safety & Health Physics Section

Below are some on the job observations during cutting away and removal of equipment:

8/9 Mechanics Wore respiratory equipment Total Personnel Checked

5/5 Welders Wore respiratory equipment Total Personnel Checked

6/9 Mechanics Wore eye glasses T.P.C.

13/13 Checked <Pol radiation on hands, shoes, & gloves T.P.C.

With the exception of one (1) Mechanic - who was smoking - No smoking eating or drinking was noted on job.

The occurance of the material release was pointed out to Operation's Supervisory People - who said they would take another look at their purge activities.

Subject: Air Analysis for F_2 in K-402

To: Mr. A. F. Becher

There is no reason to question the air sample results reported by Dave Stoddard. However the economics of the situation and the necessity or advisability of installing the recommended disposal system is questionable.

I see no reason to be too concerned when the threshold limit value is exceeded only 0.3 hr in 165.2 hrs at one location and 0.5 hr in 159.75 hours at another.

I see no real advantage in the disposal system suggested by Dave. The bulk of the reaction product would be HF with small amounts of relatively harmless CF_4. The formation of HF makes air dilution necessary. If a disposal system is necessary, air dilution of the small quantities of F_2 without the propane flame appears adequate.

Subject Air Analyses for Fluorine in K-402

Because of continued complaints about the strong odor of fluorine in the K-402-5 Instrument Maintenance shop and at the street level in front of the K-402 building additional air sampling was done simultaneously at two locations in this area.

Utilizing two Howard-Weber Fluoride Analyzers, and making appropriate temperature corrections, the atmosphere was sampled immediately outside a window of the shop on the operating floor and outside a window of the change house on the cell floor of the K-402-5 building.

Sampling was begun at 0400 hours on October 16 and continued, with a few interruptions, through 1600 hours on October 20, 1961. It was again done from 0800 hours on October 23 through 1100 hours on October 27, 1961.

Continuously recorded sampling at the operating floor level for 12 periods during 10 work days for a total of 165.2 hours revealed that the ORGDP Threshold Limit Value for fluorine was exceeded one time for a total of 20 minutes. This excessive period started at 1612 hours and ended at 1632 hours on October 19. During this period the concentration exceeded 7.0 ppm 6 times for a total of 4 minutes out of a 12 minute part of the excessive period. Seven parts per million is the upper limit of the detecting device at the sensitivity level used.

Similarly, the recording of the concentrations at the cell floor level for 10 periods for a total of 159.75 hours indicated that the Threshold Limit Value for fluorine was exceeded 12 times for a total of 34 minutes. This excessive period started at 0059 hours and ended at 0137 hours on October 20. The concentration exceeded 7 ppm momentarily only once.

In keeping with these findings and the lack of a Clean-up Reactor on the waste stream it is suggested that the method used by the Bell Aerosystems Company in Buffalo, New York for the disposal of fluorine be considered. This method consists of feeding the waste gas into a propane flame then diluting the reaction products with air before blowing them to the atmosphere.

Subject Air Analyses for Fluorine in K-402

An investigation was made of the complaints of Instrument Department employees concerning the consistant fluorine odor in the air drawn into the operating floor of the K-402 building by the ventilation system.

Utilizing the Howard-Weber Fluoride Analyzer and making appropriate temperature corrections the atmosphere of the operating floor was continuously analyzed at two points in the building during 9 days of a 15 day period beginning on 9/8/61 and ending 9/22/61. The first sampling site was in the K-402-8 building twenty feet from the north wall near some maintenance employees. The second site was in the K-402-7 building near the southeast corner of the control room. This location was used for all except the first 22 hours of sampling.

At no time during a total of 170 hours of sampling was there an indication of fluorine equal to or in excess of the threshold limit value of 1.0 ppm observed at the ORGDP. The greatest amount detected was approximately 0.3 ppm fluorine. A concentration of approximately 0.2 ppm fluorine was detected for several hours before as well as after this peak value. These concentrations occurred on the first day of sampling. All other concentrations recorded were equal to or less than 0.1 ppm fluorine.

The fluorine concentrations measured in the atmosphere of the K-402 operating floor did not constitute a threat to the health and welfare of the employees regularly assigned this area.

DESCRIPTION OF INCIDENT An air sampler was set up on the motor platform at cell 1 in K-402-5 on Friday, 4-28-61. A background reading was recorded over the weekend and on Monday when the cell change began, the power was lost about half the period between 9:00 and 10:00 AM. Consequently, only one of these samples was above the P.A.L., and this was only 3.49 c/m/ft^3 between 9:30 and 10:00 AM. However, we moved to cell 10 on the evening 5-2-61, got a good background count overnight, and good samples on the following day while a change was in progress. This same series was continued through the night and into the day of 5-4-61 when the job was almost completed. On this latter incident, the fans were blowing out of the escape alley, into the cell at each end door, and the constant air monitor was pulling a sample of effluent air at the center cell door. It may be noted on the attached tape that air results exceeded 2 c/m/ft^3 by the time the cell was open at 9:30 AM and continued until 11:00 AM, reaching a peak between 9:30 and 10:00 AM.

Decontamination Service "Kept" material pick up from floors.
B C Burrell

1359

Below are some on the job observations:

* 8 Weldors wore respirators ~~during~~ when necessary
9 Total Personnel Checked

*** 1 Electrician wore respirators when necessary
4 Total Personnel Checked

** 18 Welders and Mechanics Checked < Pol radiation on hands, shoes, clothes
19 Total Personnel Checked

8 Wore eye protection
13 T.P.C.

*** 3/9 mechanics wore respirators when necessary
T.P.C.

No smoking, eating or drinking was observed.

* did not have respirator or
** exchanged Contaminated gloves for clean ones.
*** were not wearing respirators at check time, 8:50 AM

At approximately 9:00 A.M. and thereafter respirator use was very good for Welders and mechanics.

**** Mr Leon Matthews was informed of this condition.

Equipment passes were promptly blanked off by Maintenance, and Decontamination Servicemen kept material pick ups from floors.

The system was cut in to. At 9:10 Am, at 9:18 Am the following was observed:

5 Welders were wearing respiratory equipment
6 Total Personnel Checked

1 Mechanic were wearing respiratory equipment
9 Total Personnel Checked

1 Electrician were wearing respiratory equipment
2 Total Personnel Checked

17 Checked < Pal radiation on hands, shoes, clothes
17 Total Personnel Checked

At Cell 10 pump 6B a gaseous release occurred at 9:30, which lasted for approximately fourteen (14) minutes. During this release

Well observed in the vicinity of release for approximately ten (10) minutes without respiratory protection. Was in the release with part time use of respiratory equipment.

Mr. Frank Lindsey Maintenance Supervisor Contacted Operations ~~and~~ notified them in regard to release.

I recommended to Mr Luckett and Mr Matthews that the above Personnel be sent to the dispensary for urine analysis; however, it was decided by Main Maintenance Supervisor and Mr. Dave Stoddard that urine sampling would be performed at the request of the Personnel involved.

DESCRIPTION OF INCIDENT During the period between March 21 and 31, 1961, the average air activity for a 8-hour shift exceeded the P.A.L. on 9 occasions in the K-413 Maintenance Shop. These occurred simultaneously with venting ash receivers at the K-1410 facility at which time visible material was noted coming out the stack. At the same time, the weather was damp and fumes remained near the ground. The double doors on the north side of K-413 were open a great part of the time and the building vent fans pulled air through these doors from the direction of the K-1410 Building. The process group in the K-413 Building indicated that no significant releases were experienced and on some occasions there were no maintenance activities in the building when high air activity was experienced.

The chemical division was contacted on several occasions concerning this problem and it was finally agreed to stop operations until a filter or a scrubber can be provided. Tests have bee made of filterable materials to determine their resistivity to HF and dust collecting efficiency. Nothing better than the filters now being used in the Feed Plant have been found. A steam scrubber has been recommended but was not adopted due to corrosion problems and maintenance.

I trial Hygiene was notified of the incident since this may influence their urinary findings

RADIATION MONITORIN ND CONTROL REPORT

Division: Maintenance
Department: 1005
Location: K-413 lubrication shop

Date: 5-26-61 JW

Checked by: B C Burell

Procedure: (1) Check instrument calibration; (2) Record all alpha contamination readings above the P.A.L.; (3) If all readings are less than the P.A.L., record the highest reading obtained; (4) For Beta + Gamma Radiation and Airborne Activity, record as indicated below.

Area or Equipment Checked	Approx. Area Contam. ft²	Alpha Counts/Minute		Beta + Gamma Radiation			Airborne Activity Samples			
				mrep/hr		7.5 mrep/hr				
		Surface	Wipe	Surface	1 ft	Distance (ft)	Sample Number	Time Started	Volume (ft³)	Alpha Counts/min/ft³
floor area		250	<100							
equipment		300	<100

RADIATION MONITORIN ND CONTROL REPORT

Division: Main Tenance
Department:
Location: K-1004-F3 lunch room, change house, office
Date: 4-14-61
Checked by: B C Burrell

Procedure: (1) Check instrument calibration; (2) Record all alpha contamination readings above the P.A.L.; (3) If all readings are less than the P.A.L., record the highest reading obtained; (4) For Beta + Gamma Radiation and Airborne Activity, record as indicated below.

Area or Equipment Checked	Approx. Area Contam. ft²	Alpha Counts/Minute		Beta + Gamma Radiation			Airborne Activity Samples			
				mrep/hr		7.5 mrep/hr				
		Surface	Wipe	Surface	1 ft	Distance (ft)	Sample Number	Time Started	Volume (ft³)	Alpha Counts/min/ft³
office										
floor area	42	1650	200							
chair seats	9	1500	<100	L P.A.L.						
lunch room										
floor area		300	<100	L Pal						
equipment		300	<100							
change house										
floor area	60	2400	250	L Pal						
equipment		350	<100							
at hand counter							M-142	8:25	300	0.08
in change house										

Action Taken: * 13 Checked for Pal registration on hands, shoes, clothes
16 Total Personnel Checked

* exchanged his coat and shoes for clean ones. was able to clean shoes and cap
was issued a new pair of shoes. to within the P.A.L.

Date: 2-14-61
Checked by: BC Burnett

Procedure: (1) Check instrument calibration; (2) Record all alpha contamination readings above the P.A.L.; (3) If all readings are less than the P.A.L., record the highest reading obtained; (4) For Beta + Gamma Radiation and Airborne Activity, record as indicated below.

Area or Equipment Checked	Approx. Area Contam. ft2	Alpha Counts/Minute		Beta + Gamma Radiation			Airborne Activity Samples			
				mrep/hr		7.5 mrep/hr				
		Surface	Wipe	Surface	1 ft	Distance (ft)	Sample Number	Time Started	Volume (ft3)	Alpha Counts/min/ft3
Floor area equipment & shelves	32	950	300	Nil						

Action Taken: None Necessary.

SUBJECT: Re: Use of red lights in K-1401

DATE: 11-9-61

Reply Message

FOLD

MESSAGE

Mr. Sternberg is in agreement with us that the red lights should be used for fire alarm forces, emergency exits, etc. He instructed Bob Melton to have ~~the~~ all other red lights changed to yellow.

SIGNED J. C. Worthington

RADIATION MONITORIN(ND CONTROL REPORT

Division Maintenance
Department 1077
Location K-1401 Motor Repair Shop

Date 3-17-51 JW
Checked by B C Burrell

Procedure: (1) Check instrument calibration; (2) Record all alpha contamination readings above the P.A.L.; (3) If all readings are less than the P.A.L., record the highest reading obtained; (4) For Beta + Gamma Radiation and Airborne Activity, record as indicated below.

Area or Equipment Checked	Approx. Area Contam. ft2	Alpha Counts/Minute		Beta + Gamma Radiation			Airborne Activity Samples			
				mrep/hr		7.5 mrep/hr				
		Surface	Wipe	Surface	1 ft	Distance (ft)	Sample Number	Time Started	Volume (ft3)	Alpha Counts/min/ft3
Shop area										
floor area	120	1400	200							
4 Tables	48	1300	150	<PAL						
6 motors		2000	550							
Office										
floor area		250	<100	PAL						
Equipment		300	<100							

Action Taken: Decontaminating followed by recheck
8 Checked <PAL including on hands, shoes, clothes
8 Total Personnel Checked

File

AUDIT OF K-1401 ROOFING JOB
April 26, 1961

1. Three of seven wore eye protection. It should be worn by all due to flying gravel and dusty conditions.

2. Handprotection appeared adequate.

3. Flammable liquids were in safety cans and adequately identified.

4. A charged fire water hose was available on the roof and fire extinguishers were placed nearby the tar burner.

5. Tools appeared to be in good condition.

6. Containers were available and their use was satisfactory both on the roof and on the ground.

7. All air hose couplings were not pinned.

8. The use of the equipment elevator was satisfactory.

9. The area around the chute, truck and tar burner was adequately barricaded.

10. Face shields were provided for employees chopping and handling tar.

RADIATION MONITORING AND CONTROL REPORT

Division: Maintenance
Department: K-1092
Location: K-1410 UF6 pump job

Date: 4-20-61
Checked by: B C Bunch

Procedure: (1) Check instrument calibration; (2) Record all alpha contamination readings above the P.A.L.; (3) If all readings are less than the P.A.L., record the highest reading obtained; (4) For Beta + Gamma Radiation and Airborne Activity, record as indicated below.

Area or Equipment Checked	Approx. Area Contam. ft2	Alpha Counts/Minute		Beta + Gamma Radiation			Airborne Activity Samples			
				mrep/hr		7.5 mrep/hr				
		Surface	Wipe	Surface	1 ft	Distance (ft)	Sample Number	Time Started	Volume (ft3)	Alpha Counts/min/ft3
pump				50	20	—				

Action Taken: Mechanics Were well within the PAL for this job, all well equipped with necessary safety device

JOB AUDIT OF
SEEDING AND FERTILIZING OF K-1007 AREA

5-8-61

1. The two employees observed wore safety glasses as eye protection.
2. Bags of fertilizer were handled satisfactorily and were dumped into spreader hopper with a minimum of dust.
3. All vehicles were operated at a safe speed with no unauthorized riders.
4. The chair attached to the hinged lid of the spreader was adequately secured; however, the lid was secured to the hopper with only one slip latch which with very little effort would unlatch and should the machine stop short, the lid and chair could swing forward toward the tractor. The employee riding the chair faces toward the rear and operates a cyclone seeder and his only means of staying in the chair is having his feet in the rope stirrup.

The above unsatisfactory condition was discussed with Grounds supervision, and a safety chain will be installed to positively secure the lid to the hopper and a safety device across the arms of the chair will be provided to insure that the rider will not fall out.

RADIATION MONITORIN. ND CONTROL REPORT

Division Maintenance
Department 1907
Location Vehicle Check

Date 3-29-61
Checked by B C Burrell

Procedure: (1) Check instrument calibration; (2) Record all alpha contamination readings above the P.A.L.; (3) If all readings are less than the P.A.L., record the highest reading obtained; (4) For Beta + Gamma Radiation and Airborne Activity, record as indicated below.

Area or Equipment Checked	Approx. Area Contam. ft2	Alpha Counts/Minute		Beta + Gamma Radiation			Airborne Activity Samples			
				mrep/hr		7.5 mrep/hr				
		Surface	Wipe	Surface	1 ft	Distance (ft)	Sample Number	Time Started	Volume (ft3)	Alpha Counts/min/ft3
16 Process Vehicles				<0.3	—	—				

Action Taken: None Necessary.
